$\qquad$
Exponential Unit
Wkst 2 - practice write rule find x and y values

1. E. coli bacteria Quadruple in population every twenty minutes. If the initial population is 10 complete the following:
a. Complete the following table showing the predicted population

|  | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Population |  |  |  |  |  |  |  |

b. $\mathrm{y}=$ Rule: $\qquad$ c. Recursive Rule $\qquad$
d. How many bacteria are present at 5 hours?
e. When does E. coli reach 658 ?

1. E. coli bacteria Quadruple in population every twelve minutes. If the initial population is 10 complete the following:
a. Complete the following table showing the predicted population

|  | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Population |  |  |  |  |  |  |  |

b. $y=$ Rule: $\qquad$ c. Recursive Rule $\qquad$
d. How many bacteria are present at 3 hours?
e. When does E. coli reach 658 ?
2. E. coli bacteria doubles in population every quarter hour. If the initial population is 8 complete the following:
a. Complete the following table showing the predicted population

|  | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Population |  |  |  |  |  |  |  |

b. $\mathrm{y}=$ Rule: $\qquad$ c. Recursive Rule $\qquad$
d. How many bacteria are present at 5 hours?
e. When does E. coli reach 658 ?
3. E. coli bacteria grows by 1.5 in population every 10 minutes. If the initial population is 16 complete the following:
a. Complete the following table showing the predicted population

|  | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Population |  |  |  |  |  |  |  |

b. $y=$ Rule:
c. Recursive Rule $\qquad$
d. How many bacteria are present at 5 hours?
e. When does E. coli reach 658 ?
4. E. coli bacteria grows by tripling in population every 5 minutes. If the initial population is 2 complete the following:
a. Complete the following table showing the predicted population

|  | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Population |  |  |  |  |  |  |  |

b. $\mathrm{y}=$ Rule: $\qquad$ c. Recursive Rule $\qquad$
e. When does E. coli reach 658?
d. How many bacteria are present at 5 hours?
. When does E. coli reach 658 ?
5. E. coli bacteria grows by tripling in population every 30 minutes. If the initial population is 2 complete the following:
a. Complete the following table showing the predicted population

|  | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Population |  |  |  |  |  |  |  |

b. $y=$ Rule: $\qquad$
c. Recursive Rule $\qquad$
d. How many bacteria are present at 5 hours?
e. When does E. coli reach 658 ?
