Find the missing terms for each arithmic sequence and state the common difference

1. $1,3, \ldots, 7, \ldots$
Common difference $\qquad$
2. 2 , $\qquad$ ,18, 26 , $\qquad$
Common difference $\qquad$
3. $3, \ldots, \ldots, 24,31$
Common difference $\qquad$
4. $\quad$, $\qquad$ , 20, 40, 60
Common difference $\qquad$
5. $1,4,7$, $\qquad$ , $\qquad$
6. 40 , $\qquad$ , $20,10,0$, $\qquad$
Common difference $\qquad$
$\qquad$

Two consecutive terms in a arithmetic sequence are given. Find the common difference, the recursive rule, and the explicit/function rule
7. If $f(0)=2$ and $f(1)=8$ then $f(2)=$ $\qquad$ and $f(3)=$ $\qquad$
Common ratio $\qquad$ Recursive rule $\qquad$ Explicit Rule $\qquad$
8. If $\mathrm{f}(1)=4$ and $\mathrm{f}(2)=8$ then $\mathrm{f}(3)=$ $\qquad$ and $\mathrm{f}(4)=$ $\qquad$
Common ratio $\qquad$ Recursive rule $\qquad$ Explicit Rule $\qquad$
9. If $\mathrm{f}(2)=9$ and $\mathrm{f}(3)=3$ then $\mathrm{f}(4)=$ $\qquad$ and $f(5)=$ $\qquad$
Common ratio $\qquad$ Recursive rule $\qquad$ Explicit Rule $\qquad$
10. If $\mathrm{f}(3)=16$ and $\mathrm{f}(4)=32$ then $\mathrm{f}(5)=$ $\qquad$ and $f(6)=$ $\qquad$
Common ratio $\qquad$ Recursive rule $\qquad$ Explicit Rule $\qquad$
11. If $\mathrm{f}(4)=16$ and $\mathrm{f}(5)=8$ then $\mathrm{f}(6)=$ $\qquad$ and $f(7)=$ $\qquad$
Common ratio $\qquad$ Recursive rule $\qquad$ Explicit Rule $\qquad$
12. If $f(5)=40$ and $f(6)=80$ then $f(7)=$ $\qquad$ and $f(8)=$ $\qquad$
Common ratio $\qquad$ Recursive rule $\qquad$ Explicit Rule $\qquad$
